SUMMARY

Motivated graduating BSIT student specializing in Web and Mobile Application Development with hands-on experience in front-end development using React, HTML, CSS, and JavaScript. Completed internship projects focused on system development and UI design, with a strong foundation in networking and cybersecurity supported by industry certifications. Seeking an entry-level IT or software development position to apply technical, analytical, and problem-solving skills while completing studies.

TECHNICAL SKILLS

- **Languages:** JavaScript, PHP
- **Frontend:** React.js, HTML5, CSS3
- **Backend:** Laravel (MVC, authentication, API development)
- **Cross-Platform:** FlutterFlow
- **Database/Cloud:** Supabase, Firebase, MySQL
- **APIs:** Google Maps API, RESTful services
- **Tools:** Git, GitHub, VS Code, XAMPP
- **Core Competencies:** Role-Based Access Control, Geolocation Integration, Responsive Design, Debugging

EDUCATION

Bachelor of Science in Information Technology – Web and Mobile Application Development

Sept 2022 – Sept 2026

Far Eastern University – Alabang

WORK EXPERIENCE

Olopa Corporation

January 2026 – July 2026

Software Developer Intern / IT Administrator

- Developed front-end components for an Attendance Monitoring System using React, HTML, CSS, and JavaScript
- Assisted in backend development and maintenance using Laravel and PHP
- Implemented role-based interfaces for clock in/out and account management
- Translated Figma wireframes into responsive UI designs
- Collaborated using Git and GitHub for version control and team coordination
- Coordinated with team members as Team Leader to monitor progress and task completion
- Oversaw internship administration for multiple departments, including onboarding, performance monitoring, attendance tracking, documentation management, and coordination with team leaders.

RELEVANT PROJECTS

Rylim Memory Atlas (Capstone Project)

Technologies: FlutterFlow, Firebase, Google Maps API

- Developed a cross-platform application that allows users to pin and store memories using geolocation
- Integrated Google Maps API for location-based features and place recommendations
- Utilized Firebase for real-time data storage, synchronization, and user authentication
- Designed an interactive interface for adding multimedia content (photos, notes, audio)
- Implemented scalable cloud-based architecture to support growing user data
